

TITLE OF INVENTION:

My name is Johnny Hilton-Bey. I am a United State Citizen. I live at 5628-D Loch Raven Blvd., Baltimore, Maryland 21239-2920. The name of my invention is: INTRUDER MONITOR SYSTEM.

CROSS-REFERENCE TO RELATED APPLICATION:

I entered the Intruder Monitor System into the Disclosure Document Program. I mailed it out on January 17, 2002. I have not received a Disclosure Document Number yet.

STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT:

I use to be a Passenger Assistance Link Operator for the railroad. I use to monitor the railroad stops with a camera mounted in the stations from a office building. I also went around to several stores that sell Security Systems and there is no such system. I also went to the University Of Maryland at College Park, they have a Reference Collection Of United State Patent Library where research is done.

REFERENCE TO A MICROFICHE APPENDIX:

Not Applicable.

BACKGROUND OF THE INVENTION:

The Intruder Monitor System is design for the Security Field. At this point and time you need a person to monitor a place inside and outside with cameras and a Monitor System.

BRIEF SUMMARY OF THE INVENTION:

The Intruder Monitor System is design to monitor a place without a person at the controls pushing buttons or turning knobs. This Security System monitor and records and sound off alarms when a person is out of his or her place without them being there. The Intruder Monitor System also let a person monitor a place without setting off the alarm when they are at the monitor and controls or not at the controls.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF DRAWING:

Not Applicable.

Inventor's Name:

Johnny Hilton-Bey
Johnny Hilton-Bey

2006 FEB 20 10 03 AM

DETAILED DESCRIPTION OF THE INVENTION:

The Intruder Monitor System comes with a Universal Device that can be hooked up to any Television that works with a Remote Control and Video Cassette Recorder. It also come with a camera or several cameras with a built in Motion Detector. It comes with a Motion Detector with a Key Pad on it. This Key Pad lets a person put its own code in the Security System to turn the system off and on. This is how the Security System works, when a person have the system hooked up. Before a person leaves out of a place, by pushing a button, the person can set the Security System. The Security System allows the person several seconds or minutes to leave out of a place before arming it self. When a intruder enters or break in a place. The Motion Detector picks up the intruders movement and sound. The Alarm goes off, the Motion Detector turns on the TV. and VCR. like a Univesral Remote Control does to record. The recording will go on as long as the alarm stays on. Once the alarm goes off the TV. and VCR. turns off as well. Once the intruder here the alarm they usually leave. If they do not leave the Motion Detector will pick up their movement in several minutes and the alarm will sound again, and the recording will continue. When monitoring a place without the Key Pad Motion Detector turn on. A person must use the button on the VCR. or the remote to record.

CLAIM OR CLAIMS:

"I Johnny Hilton-Bey, claim the Security System will monitor a place without a person at the control and record and sound the alarms." If a person have a small TV that can be hooked up to this system they can monitor there place when they are out walking to the store or out driving around. The Motion Detectors light stays on with this system to let someone know somebody has been in there place. The Motion Detector turns on and off the Television. The Motion Detector also turns the recorder on and off. The other Motion Detector Lights goes out when the Alarm stop sounding.

ABSTRACT OF THE DISCLOSURE:

Not Applicable.
